

Self healing robot

Horea Mureşan

Coord. Dr. Associate Professor Mihai Oltean

Babes-Bolyai University

Summary

- A robot that has two parts

Summary

- A mobile component

Summary

- A stationary component

Summary

- A link between the two

Objective

A self healing robot

A self healing phone

Activities

- Choosing a processing unit
- Infrared emitters and receivers
- Wireless communication

Activities

- Motors and movement
- Hall effect sensor
- Magnets for aligning the link

Challenges

- Laser like infrared emission
- Multiple IR receivers on the same Arduino
- A reliable way to link the two parts
- Small but powerful power supply

Next steps

- Further reducing the size
- The possibility of calling and texting
- Improving the detection
